

Optimising Data and Saving Lives: Achieving Compliance in UK Fire and Rescue

Leverage compliance with new data standards to enhance operational efficiency.

New data management rules, implemented by the Fire Standards Board in August 2022, ensure that fire and rescue services across the UK "deliver excellence to the public by maximising the value of good quality and reliable data."

To guarantee your service is meeting this, you will need to leverage accurate and complete data, that fuels intelligent decision-making and contributes to your ability to save lives.

However, you don't need to elevate your data journey alone.

Imagine your service, guided purely by accurate data, saving precious lives and resources. That's the power of data, and at Simpson Associates, we're here to help you achieve it.

We stand alongside over a third of UK blue light organisations, including fire and rescue services. With our extensive experience and advanced data solutions, we empower fire departments to unlock the full potential of their information, providing you with optimised response strategies for effective firefighting.

Our Fire Service Customers

We have worked with these fire services to reduce risks and help them to make evidence-based decisions that elevate community safety.

How Can We Empower Your Fire Service?

Struggling to make the most of your data? Our comprehensive Data Management Gap Analysis helps fire departments harness the potential of their data, enhancing operational efficiency and improving responsiveness.

Our team will kickstart your journey by formalising a Data Strategy assessment tailored to your team and its needs. We'll assess your current data practices against the core principles of the Data Management Fire Standard (data quality, accessibility, collaboration) to create a personalised roadmap for success.

This roadmap for success will align to your data management practices with strategic objectives. Guiding you to unlock the true value of data: to anticipate, adapt and conquer the ever-evolving challenges of modern emergency services.

After the assessment's completion, several other assessments can be taken to gather further information on your organisation including data maturity and skill set. This ensures the solution is truly personalised to you and will allow you to close the gap between poor and successful data management.

Partner with Simpson Associates for Data-Driven Fire Safety

- ✔ **Compliance and Confidence**
Achieve seamless compliance, avoid hefty fines, and gain expert support throughout the process.
- ✔ **Enhanced Risk Reduction**
Predict and prevent emergencies, target safety campaigns to high-risk areas, and optimise resource allocation based on real-time data.
- ✔ **Personalised Data Journey**
We ensure your data journey is as unique as your department, by building the analysis around you and your needs.
- ✔ **Data Optimisation**
Enhance data quality, streamline collection and access, break down silos, and unlock hidden insights.
- ✔ **Community Impact**
Build trust with data transparency, improve community safety through targeted interventions, and demonstrate the value of data-driven decision-making.
